Objet: Flash info Technique : Evolution logiciel carte mère CMSI V3 (CE01001A) - V11.2

Importance: Haute

Bonjour,

Bonjour,

Le logiciel U5 de la carte mère UTI (CE01001) évolue et passe en [Version 11.2](#) (structure 102)

Les améliorations apportées concernent :

- L'affichage des libellés des entrées de défauts d'alimentation,
- L'ajout de la fonctionnalité « Télémaintenance »,
- La programmation de la temporisation d'alarme restreinte par pas de 30 secondes au lieu d'1 minute sur la plage 0 à 5 minutes,
- La correction d'un problème de réarmement des issues de secours après un acquittement processus sur l'évacuation,
- La communication avec les répéteurs LON,

Cette nouvelle version est dès à présent disponible sur l'[Intranews](#)

Merci de diffuser largement cette information auprès de tous vos collaborateurs

A votre disposition pour tout complément d'information,

Bruno CHAPUIS
